4.1.1. The institution has adequate facilities for teaching - learning. viz., classrooms, laboratories, computing equipment etc

Dr Ulhas Patil Medical College is affiliated to MUHS. All the infrastructure, facilities requirements are given by statutory and regulatory authorities i.e. by Medical Council of India now known as now 'National Medical Commission'.

The institution ensures adequate availability and optimal utilization of physical infrastructure as it is critically linked to the vision of the college—'to create an environment of excellence in education.

The Institute has all the required infrastructure and facilities for teaching learning of UG & PG programs like classrooms, ICT-enabled classrooms, seminar halls, facilities for clinical learning, learning in the community, Teleconferences, AYUSH-related learning cum therapy centre, well-equipped laboratories, skills labs etc. as per requirements of statutory and regulatory bodies.

- The campus is having physical infrastructure facilities that support and facilitates Curricular, co-curricular, extracurricular and support activities
- The DUPMC has well ventilated lecture halls, laboratories, seminar halls, library to conduct of the various academic i.e. teaching learning, activities.
- Total 24 departments are established in the DUPMC. Each Department is having space for staff rooms, HOD cabin, department wise libraries, museum, seminar halls, , laboratories dissection hall and demonstration rooms.
- Class rooms are sufficient in number and size as stated by regulatory requirements.
- Class rooms are equipped with LAN connection, High speed internet, LCD projectors etc. All the laboratories are equipped with infrastructure and facilities as per the requirements of statutory body.
- DUPMC have well-equipped laboratories with the infrastructure as stated by the regulatory authority MCI.
- Each department has well ventilated and equipped seminar hall with the facility of audio and video systems, LAN, internet, sufficient seating facility etc.
- Institute also focuses on d community learning with community services.

- Rural health training centre(RHTC) at the village bannod..... District Jalgaon. This health training centre is established as per the guidelines and approval by the Maharashtra government facilitates medical services for healthcare requirements of rural areas.
- Urban health centre (UHC) which provides healthcare services to urban slum and poor population.
- The RHTC & UHC centres is having adequate facilities for teaching learning, and dormitories for medical students and faculties to stay during their peripheral community postings and camp.
- Adequate transport facility is provided by the Institute for carrying out field visits.
- Clinical teaching learning facilities are available in the institute like-
 - Attachedbedded hospital
 - Various Wards
 - OPD's
 - Operation Theatres
 - Simulation room
 - Debriefing rooms
 - Laboratories
- Skill lab are well established and equipped with models and manikins for basic skills like hand washing techniques, CPR, First aids like dressing & suturing, etc. Students are encouraged to perform different skills through videos, simulations, and demonstrations on subjects.
- Departmental museums are maintained as per the requirement of course for teaching and learning purpose. Clinical specimens are maintained and updated regularly.

Standard Operating Procedures for the Laboratory

Safety Requirements

- General laboratory procedures should be followed, which include: no eating, no chewing gum, no drinking, and no applying of cosmetics in the work area. Laboratory coats and gloves must be worn at all times in the work area, unless the protocol specifically describes the appropriate attire for the procedure.
- All samples should be considered as potentially hazardous. Introduction Clinical chemistry (also known as clinical biochemistry, chemical pathology, medical biochemistry or pure blood chemistry) is the area of pathology that is generally concerned with analysis of bodily fluids.
- The discipline with the use of simple chemical tests for various components of blood and urine. Subsequently other techniques were applied including the use and measurement of enzyme activities, spectrophotometry, electrophoresis and immunoassay.
- Most current laboratories are now highly automated and use assays that are closely monitored and quality controlled.
- All biochemical tests come under chemical pathology.
- These are performed on any kind of body fluid, but mostly on serum or plasma. Serum is the yellow watery part of blood that is left after blood has been allowed to clot and all blood cells have been removed.
- This is most easily done by centrifugation which packs the denser blood cells and platelets to the bottom of the centrifuge tube, leaving the liquid serum fraction resting above the packed cells. Plasma is essentially the same as serum, but is obtained by centrifuging the blood without clotting.
- Plasma therefore contains all of the clotting factors, including fibrinogen. A large medical laboratory will accept samples for up to about 700 different kinds of tests. Even the largest of laboratories rarely do all these tests themselves and some need to be referred to other labs.

- This large array of tests can be further sub-categorized into sub-specialties of: •
General or routine chemistry
- • Endocrinology - the study of hormones • Immunology - the study of the immune system and antibodies
